REASON FOR ALLOWANCE

Art Unit: 2121

The following is an Examiner's statement for reason for allowance:

3. Claims 13 – 26 and 28 – 30 are considered allowable since when reading the claims in light of the specification, as per MPEP 2111.01, none of the prior art of record teach or render obvious applicant's claimed invention. In particular, as pointed out below, the art lacks certain features and the combination as specified in the respective claim(s).
4. The features recited in claim 1, "segment tracking means for converting the measured data from time domain to space domain using segment tracking"; therein, "segment tracking means" referred back to specification (Pp[0028] – Pp[0030] in pub. 2007/0106400 and page 8, 2<sup>nd</sup> paragraph – page 9, 1<sup>st</sup> paragraph in original filed documents.

[0028] The **segment tracking** carried out by means 3 for conversion of data will now be explained.

[0029] The on-line data regarding the finish rolling temperature (FRT), speed of the strip and the signal of the valve status (opening/closing), the actual cooling temperature (CT) are obtained from the processor 2. The cooling of strip on run-out table (ROT) is a dynamic process. The objective of finish rolling is to roll the entire length of the strip in the austenitic range. To attain this temperature, the operator needs to change the speed of rolling. On the other hand, the objective of cooling is to maintain a constant cooling rate and a constant cooling temperature (CT). This means with the increase in speed, the more number of headers are required to be made on and with decrease in speed the more number of headers are to be made off. Thus, a steady state cooling is activated.

[0030] Therefore, the process data that is collected every second during the whole cooling process (about 1.5-2 min) shows variation of speed and variation of number of header opening. This is the time domain data. To make it space domain to obtain the finish rolling temperature (FRT), the amount of water required cooling the strip i.e. the number of header opening, sequencing of header pattern, the total strip length on run-out table is divided into some segments and each segment is tracked to obtain the process history. This process of **conversion** is called **segment tracking** and this segmental file with records converted from time to space domain is fed as an input to on-line model.

Art Unit: 2121

5. As mentioned above, the art lacks certain features and the combination when taken in context of the claim(s) as a whole, was not uncovered in the prior art. Moreover, the dependent claims 14 – 26 and 28 – 30 are allowed as they depend upon an allowable independent claim 13.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments regarding Statement of Reason for Allowance”.
